

LiveStream Recorder

Multi-Stream Content Capture & Recording

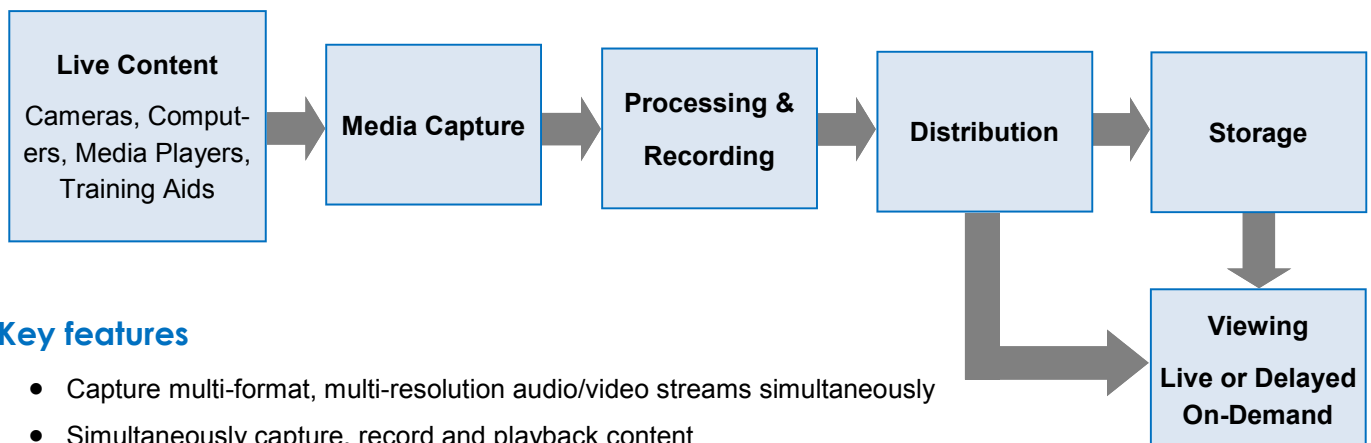

Introducing the LiveStream Platform from TeleDelta.

Content Capture, Storage, Distribution and Playback solutions for Education, Corporate and Training Environments.

Utilising computer IP technology the LiveStream platform can capture content from a wide range of input devices including cameras, computers and teaching aids, actively record up to 10 video streams (per recorder) and output to a large variety of viewing devices including iPads, Tablets and other Mobile Devices. Using IP technology, content can be distributed and viewed from just about anywhere an IP network connection can be reached including “in The Cloud” via PC and in-house IPTV networks.

Designed to operate as either a stand-alone platform or integrated with an existing control system the LiveStream platform is agnostic in its control choice allowing integration to a wide range of control systems including AMX and Crestron.

Capture - Store - Display
